Balancing Chemical Reactions Chemical reactions are like recipes in that the quantity and types of ingredients, or reactants, can be related to the quantity and type of cooked food, or product(s) formed. Balancing chemical reactions then allows one to determine stoichiometry calculations by understanding the ratio between reactants and/or products.

represented by a chemical equation using formulas (top). This example illustrates the fundamental aspects of any chemical equation: 1.

The substances undergoing reaction are called reactants, and their formulas are placed on the left side of the equation.

2. The substances generated by the reaction are called products, and their formulas are placed on the right side of the equation. 3.
