

cellular reproduction section 1 pdf

Senescence (/ s ɛˈ ɛː n ɛː s ɛː m n s /) or biological aging is the gradual deterioration of functional characteristics. The word senescence can refer either to cellular senescence or to senescence of the whole organism. Organismal senescence involves an increase in death rates and/or a decrease in fecundity with increasing age, at least in the later part of an organism's life cycle.

Senescence - Wikipedia

Sexual reproduction is a kind of life cycle where generations alternate between cells with a single set of chromosomes and cells with a double set of chromosomes (). Sexual reproduction is by far the most common life cycle in eukaryotes, for example animals and plants.. Diploid cells divide into haploid cells in a process called meiosis. Two haploid cells combine into one diploid cell in a ...

Significance. Plastics are a contaminant of emerging concern accumulating in marine ecosystems. Plastics tend to break down into small particles, called microplastics, which also enter the marine environment directly as fragments from a variety of sources, including cosmetics, clothing, and industrial processes.

Oyster reproduction is affected by exposure to polystyrene
