Personal questions can also encourage people to be more thoughtful in their engagement with particular objects. In 2007, Exploratorium researcher Joyce Ma published a brief formative study on Daisy, an artificially intelligent computer program that engages visitors in text-based conversation. Daisy is a "chatbot" with some pre-programmed questions in her repertoire, and Ma was studying the ...

Relational algebra, first created by Edgar F. Codd while at IBM, is a family of algebras with a well-founded semantics used for modelling the data stored in relational databases, and defining queries on it.. The main application of relational algebra is providing a theoretical foundation for relational databases, particularly query languages for such databases, chief among which is SQL

Database normalization is the process of restructuring a relational database in accordance with a series of so-called normal forms in order to reduce data redundancy and improve data integrity. It was first proposed by Edgar F. Codd as an integral part of his relational model.. Normalization entails organizing the columns (attributes) and tables (relations) of a database to ensure that their ...

The line `bar = foo` does not copy the contents of the variable, only its "object reference". To understand what is going on here, we need to know how lists are stored in the computer's memory. In 4.1, we see that a list `foo` is a reference to an object stored at location 3133 (which is itself a series of pointers to other locations holding strings). When we assign `bar = foo`, it is just the ...
