A computer network, or data network, is a digital telecommunications network which allows nodes to share resources. In computer networks, computing devices exchange data with each other using connections between nodes. These data links are established over cable media such as wires or optic cables, or wireless media such as WiFi.. Network computer devices that originate, route and terminate the ...

Computer security, cybersecurity or information technology security (IT security) is the protection of computer systems from theft or damage to their hardware, software or electronic data, as well as from disruption or misdirection of the services they provide.. The field is growing in importance due to increasing reliance on computer systems, the Internet and wireless networks such as ...

Welcome to CSL @ SKKU. The Computer Systems Laboratory at Sungkyunkwan University was founded in 2008, currently being led by Prof. Joonwon Lee, Prof. Jin-Soo Kim, Prof. Euseong Seo and Prof. Jinkyu Jeong.. Our research areas are centered around the computer systems architecture and systems software, which is, in nature, an evolving multi-disciplinary research area encompassing computer ...

Network Layer It is responsible for the source to destination delivery of a packet across multiple networks. If two systems are attached to different networks with devices like routers, then N/W layer is used. Thus DLL overseas the delivery of the packet between the two systems on same network and the network

When you think of leaders in the computing industry, your first thoughts probably turn to companies like Apple, Microsoft, and IBM. But flash back a few decades, and the leaders of those companies all wouldâ€™ve gladly bowed down to Digital Equipment Corporation, or DEC, who began paving the way for everyone starting in 1957.

Abstract: Deep learning algorithms have been shown to perform extremely well on many classical machine learning problems. However, recent studies have shown that deep learning, like other machine learning techniques, is vulnerable to adversarial samples: inputs crafted to force a deep neural network (DNN) to provide adversary-selected outputs.
