Programmers write programs according to the specifications determined primarily by more senior programmers and by systems analysts. After the design process is complete, it is the job of the programmer to convert that design into a logical series of instructions that the computer can follow.

### **Programmer - Wikipedia**

A computer is a device that can be instructed to carry out sequences of arithmetic or logical operations automatically via computer programming. Modern computers have the ability to follow generalized sets of operations, called programs. These programs enable computers to perform an extremely wide range of tasks.

Matt Might has a blog post "Order Theory for Computer Scientists" in which he concisely outlines some basics of order theory. It is a nice post but it is targeted towards computer scientists and is possibly only of interest to that audience, especially since all of his examples are in Haskell, not that there is anything wrong with that, but I think this is unfortunate as these ideas are ...
