At those edge rates it gets tricky. You are at the edge of lumped-model and distributed-model regimes for circuits. Most of what works at lower frequencies and edge rates starts to stop working at that kind of rise time.

LHCb, the world's first dedicated b-physics experiment at a hadron collider, is not only producing world-leading results in heavy flavour physics, but it is obtaining important results also in other fields thanks to its excellent detector performances and unique large-rapidity acceptance that make it a general purpose detector in the forward region.

Zero-point energy (ZPE) is the difference between the lowest possible energy that a quantum mechanical system may have, and the classical minimum energy of the system. Unlike in classical mechanics, quantum systems constantly fluctuate in their lowest energy state due to the Heisenberg uncertainty principle. As well as atoms and molecules, the empty space of the vacuum has these properties.

One of the most annoying things about climate forecasts is the apparent need to predict catastrophe. Of course, it makes good press, like the latest from Bryan Walsh at Time, Climate Change Could Cause the Next Great Famine. While such theories can always find a home with some learned academics, for those

who "do" rather than "teach", the world is a very different place.
