Going for gold: The mono- and di-chloroform solvates of $[\text{Au}_2(\mu\text{-}1,2\text{-bis(diphenylarsino)ethane)}_2](\text{AsF}_6)_2$ undergo single-crystal-to-single-crystal transformations that result in gain or loss of only one chloroform molecule and changes in the structure and luminescence of the digold cation.

Chemistry – A European Journal: Early View

Sodium triacetoxyborohydride is presented as a general reducing agent for the reductive amination of aldehydes and ketones. Procedures for using this mild and selective reagent have been developed for a wide variety of substrates.

Reductive Amination of Aldehydes and Ketones with Sodium

Abstract. It is widely acknowledged that the excessive reactive oxygen species (ROS) or reactive nitrogen species (RNS) induced oxidative stress will cause significant damage to cell structure and biomolecular function, directly or indirectly leading to a number of diseases.

Reviews on Mechanisms of In Vitro Antioxidant Activity of

Lithium (from Greek: λίθος, translit. lithos, lit. 'stone') is a chemical element with symbol Li and atomic number 3. It is a soft, silvery-white alkali metal. Under standard conditions, it is the lightest metal and the lightest solid element. Like all alkali metals, lithium is highly reactive and flammable, and is stored in mineral oil. When cut, it exhibits a metallic luster, but moist air ...

Lithium - Wikipedia

DNA is a long polymer made from repeating units called nucleotides. The structure of DNA is dynamic along its length, being capable of coiling into tight loops and other shapes. In all species it is composed of two helical chains, bound to each other by hydrogen bonds. Both chains are coiled around the same axis, and have the same pitch of 34 Å (3.4 nanometres).

DNA - Wikipedia

Figure 1. In Situ Capture of Locus-Specific Chromatin Interactions by Biotinylated dCas9 (A) Schematic of dCas9-mediated capture of chromatin interactions. (B) The three components of the CAPTURE system: a FB-dCas9, a biotin ligase BirA, and target-specific sgRNAs.

In Situ Capture of Chromatin Interactions by Biotinylated

The history of chitosan dates back to the 19th century, when Rouget discussed the deacetylated forms of the parent chitin natural polymer in 1859. During the past 20 years, a substantial amount of work has been reported on chitosan and its potential use in various bioapplications.

Chitosan – A versatile semi-synthetic polymer in biomedical

Abstract: Environmental, economic, and safety challenges have provoked packaging scientists and producers to partially substitute petrochemical-based polymers with biodegradable ones. The general purpose of this review is to introduce polylactic acid (PLA), a compostable, biodegradable thermoplastic made from renewable sources.

Poly-Lactic Acid: Production, Applications, Nanocomposites
