Fighting global warming by climate engineering: Is the Earth radiation management and the solar radiation management any option for fighting climate change?

Fighting global warming by climate engineering: Is the

We describe a process for capturing CO₂ from the atmosphere in an industrial plant. The design captures $\hat{1}$ Mt-CO₂ /year in a continuous process using an aqueous KOH sorbent coupled to a calcium caustic recovery loop. We describe the design rationale, summarize performance of the major unit operations, and provide a capital cost breakdown developed with an independent consulting engineering ...

Polymorphism is the ability of solid materials to exist in two or more crystalline forms with different arrangements or conformations of the constituents in the crystal lattice.

Polymorphism: The Phenomenon Affecting the Performance of

Hybridization is the process of complementary base pairs binding to form a double helix. Melting is the process by which the interactions between the strands of the double helix are broken, separating the two nucleic acid strands.

Global cooling was a conjecture during the 1970s of imminent cooling of the Earth's surface and atmosphere culminating in a period of extensive glaciation. Press reports at the time did not accurately reflect the full scope of the debate in the scientific literature. The current scientific opinion on climate change is that the Earth underwent global warming throughout the 20th century and ...

Distillation technologies for removal of phenols from water are all variants of steam distillation and thus have an energy requirement to be economically met.

A Short Review of Techniques for Phenol Removal from

The cause of the trend is a puzzle. Physics demands that water expand as its temperature increases. But to keep the rate of rise constant, as observed, expansion of sea water evidently must be offset by something else.
