Q: When is the optimal timing for collection of specimens for laboratory confirmation of mumps? A: The acute-phase serum and clinical samples for detection of virus should be collected as soon as possible upon suspicion of mumps disease. The early collection of buccal swab specimens provides the best means of laboratory confirmation, particularly among suspected mumps patients with a history ...

Amylase (/ ˈ ɛ ɪ m ɛ ɪ s /) are enzymes that catalyse the hydrolysis of starch into sugars. Amylase is present in the saliva of humans and some other mammals, where it begins the chemical process of digestion. Foods that contain large amounts of starch but little sugar, such as rice and potatoes, may acquire a slightly sweet taste as they are chewed because amylase degrades some of their ...

Hematocrit can vary from the determining factors of the number of red blood cells. These factors can be from the age and sex of the subject. [clarification needed] Typically, a higher hematocrit level signifies the blood sample's ability to transport oxygen, which has led to reports that an "optimal hematocrit level" may exist. Optimal hematocrit levels have been studied through combinations of ...

In about 20% of patients, Clostridium difficile infection will resolve within 2-3 days of discontinuing the

antibiotic to which the patient was previously exposed. The infection can usually be treated with an appropriate course (about 10 days) of antibiotics, including metronidazole, vancomycin (administered orally), or recently approved fidaxomicin.
