The original and most important application of CO methanation is the removal of carbon monoxide from syngases, e.g. in ammonia production processes and later upstream proton-exchange membrane fuel cells. CO methanation gained importance for the production of SNG during the oil crisis in the late 1970s.

### **Review on methanation – From fundamentals to current**

In the past 10–15 years, the microbial fuel cell (MFC) technology has captured the attention of the scientific community for the possibility of transforming organic waste directly into electricity through microbially catalyzed anodic, and microbial/enzymatic/abiotic cathodic electrochemical reactions.
