

### **genes and chromosomes worksheet pdf**

Genes and Chromosomes 14. All humans have pairs of non-sex chromosomes called , and pair of sex chromosomes. 16. The combination of sex chromosomes distinguishes (tells apart) females from males. There are 2 types of sex chromosomes and . 17. In females the sex chromosomes are the same/different (circle one).

Genes also control the life processes of your cells. In both asexual and sexual reproduction, chromosomes (and genes) are passed from parents to offspring. During asexual reproduction, each daughter cell receives chromosomes from a single parent cell.

### **Chromosome Worksheet I. What are chromosomes?**

exception to this rule applies to the genes carried on the sex chromosomes, X and Y. Since men have only one copy of the X chromosome, they have only one copy of all the genes carried on the X chromosome. Women have two copies of the X chromosome in their cells and so they have two copies of all the genes carried on the X chromosome.

### **2:22 PM11111 Fact Sheet 1 | AN INTRODUCTION TO DNA, GENES**

have 23 unique chromosomes or  $n=23$ . Complete the following table of chromosome number in various species. Notice that the number of homologous chromosome is the same as the number of chromosomes found in a haploid cell. Species Number of chromosomes in diploid cells ( $2n$ ) Number of homologous chromosome pairs in diploid cells Number of ...

Lecture Activity - GENETICS WORKSHEET In the following problems, you will review the basics of solving genetics problems. Before you begin, review the following basic concepts: A. The problems in this activity deal with Mendelian genetic traits. Mendelian genetics traits are determined by a single gene locus with exactly two (2) alleles.

Gene and Chromosome Mutation Worksheet (reference pgs. 239-240 in Modern Biology textbook) 3 8. Below is the DNA base sequence for the normal protein for normal hemoglobin and the base sequence for

### **Genetic Mutation Worksheet**

Homologous chromosomes - You get one homologue from you fathers sperm cell and one homologue from you mothers egg cell. When a tetrad forms (homologous chromosomes line up) they exchange parts. Thus the chromosome inherited from dad gets some of mom's alleles. The chromosome inherited from mom gets some of dads alleles. Thus genes are shuffled.
