Working with Attributes. GIS data has two parts - features and attributes. Attributes are structured data about each feature. This tutorial shows how to view the attributes and do basic queries on them in QGIS.

## **Working with Attributes - QGIS Tutorials and Tips**

Searching and Downloading OpenStreetMap Data. Getting high quality data is essential for any GIS task. One great resource for free and openly licensed data is OpenStreetMap(OSM). The OSM database consists of streets, local data as well as building polygons.

## **Searching and Downloading OpenStreetMap Data - QGIS**

Mapfile Structure. This is what the mapfile looks like: Example1-1.map. The MAPFILE is MapServer's basic configuration mechanism. It is made up of objects and each object can have keywords or other objects. It has a hierarchical structure such that some objects fall under other objects on top of this hierarchy is the MAP object, all other objects belong to it.

## **Example 1.1 - MapServer 7.2.1 documentation**

How the documentation is organized. Django has a lot of documentation. A high-level overview of how it's organized will help you know where to look for certain things:

A classification model (classifier or diagnosis) is a mapping of instances between certain classes/groups. The classifier or diagnosis result can be a real value (continuous output), in which case the classifier boundary between classes must be determined by a threshold value (for instance, to determine whether a person has hypertension based on a blood pressure measure).
