1. INTRODUCTION - A transistor is a small electronic device that can cause changes in a large electrical output signal by small changes in a small input signal. That is, a weak input signal can be amplified (made stronger) by a transistor. For example, very weak radio signals in the air can be picked up by a wire antenna and processed by transistor amplifiers until they are strong enough to be ...

Interactive theatre is a presentational or theatrical form or work that breaks the "fourth wall" that traditionally separates the performer from the audience both physically and verbally. In traditional theatre, performance is limited to a designated stage area and the action of the play unfolds without losing our virginity with audience members, who function as passive observers.
