Particle physics (also known as high energy physics) is a branch of physics that studies the nature of the particles that constitute matter and radiation. Although the word particle can refer to various types of very small objects (e.g. protons, gas particles, or even household dust), particle physics usually investigates the irreducibly smallest detectable particles and the fundamental ...

Speed is the distance traveled divided by the time of travel. For example; if you were to travel a distance of 10 miles in 2 hours time, then your average speed equals 5 miles per hour.  $s=d/t$  ( $s$ =speed,  $d$ =distance,  $t$ =time, and the / means to divide). The word velocity is very similar to speed (except velocity also has a direction called a vector) and in most cases we will now use the letter "v ...

The nuclear force (or nucleonâ€“nucleon interaction or residual strong force) is a force that acts between the protons and neutrons of atoms. Neutrons and protons, both nucleons, are affected by the nuclear force almost identically. Since protons have charge +1 e, they experience an electric force that tends to push them apart, but at short range the attractive nuclear force is strong enough to ...

Rutgers Physics News Congratulations once again to our Society of Physics Students Chapter. The SPS National Office has once again awarded the Rutgers SPS Chapter Distinguished Chapter status.. Congratulations to the Chapter, and particularly the Officers, on the fine work they did to earn that status:

Our palladium page has over 270 facts that span 85 different quantities. Each entry has a full citation identifying its source. Areas covered include atomic structure, physical properties, atomic interaction,

thermodynamics, identification, atomic size, crystal structure, history, abundances, and nomenclature.

It is a ridiculous list of pseudo science. How substantive and persuasive a rebuttal. Have you figured out how to explain why Venus and Mars have surface temperatures +447 degrees C warmer and -75 degrees C colder (respectively) than Earth despite both having 950,000 ppm CO2 atmospheres (compared to Earth's 400 ppm) without using (a) distance from the Sun or (b) atmospheric ...
