In calculus, the double derivative, or the double anti-integral, of a function f is the derivative of the derivative of f . Roughly speaking, the second derivative measures how the rate of change of a quantity is itself changing; for example, the second derivative of the position of a vehicle with respect to time is the instantaneous acceleration of the vehicle, or the rate at which the velocity ...

Second derivative - Wikipedia

The derivative of a function of a real variable measures the sensitivity to change of the function value (output value) with respect to a change in its argument (input value). Derivatives are a fundamental tool of calculus. For example, the derivative of the position of a moving object with respect to time is the object's velocity: this measures how quickly the position of the object changes ...

Derivative - Wikipedia

La derivada de una función de una variable real mide la sensibilidad al cambio del valor de la función (valor de salida) con respecto a un cambio en su argumento (valor de entrada). Las derivadas son una herramienta fundamental del cálculo. Por ejemplo, la derivada de la posición de un objeto en movimiento con respecto al tiempo es la velocidad: esto mide cuán rápidamente cambia la posición del objeto ...
